MENTAL HEALTH TASK FORCE

FCAAP’s Mental Health Task Force serves to develop resources and strategies to increase support and address youth mental health care needs. We aim to identify and address risk factors, improve access to care, increase education, and optimize community resources. With strong team collaboration and statewide advocacy, we strive to make a positive impact on mental health care not only in the state of Florida, but to be a nationwide model on how to best support our children, adolescents, parents, educational system, and care providers.
